

The Wildlife Trusts logo is at the top left. The main heading is "National Marine Week: Sat 27 Jul - Sun 11 Aug 2013". Below this is a photograph of people on a rocky shore. Text below the photo reads: "National Marine Week is the time to celebrate UK seas! Spend happy afternoons exploring rockpools, be dazzled out snorkelling by a chance encounter with a lobster or simply be amazed by the sight of seabirds from the end of a pier." There is also a section for "#wildlifeweek" with a small image of a bird.

The Marine Life Angus website has a blue header with the logo and navigation menu. The main content area features a large image of a coastline with a lighthouse. Text below the image states: "The Angus coastline is a wildlife watching secret and is home to a wide range of coastal and marine habitats and species." There are several smaller sections with images and text, including "THE ANGUS COAST & AREA OF INTEREST", "SPECIES", "REPORT A SIGHTING", and "SANDHOGS & COYLES".

The UK's marine environment is home to some of our most fascinating wildlife, such as whales, dolphins, seals, puffins and dolphins.

This is your chance to explore the seashore, discover dunes and wallow with whelks - however you don't have to wait for National Marine Week to get out there.

### Spot Marine Life around Angus's Fantastic Coastline

The [www.marinelifeangus.co.uk](http://www.marinelifeangus.co.uk) website and its project recording whales and dolphins in Angus waters promote local coastal sites, great for land based wildlife watching.

Since recording began in 2011 sightings of bottlenose dolphins, minke whale, harbour porpoise, common dolphin and even humpback whales have occurred at many locations along the coastline of Angus.

If you spot any whales and dolphins please submit your sightings at [www.marinelifeangus.co.uk](http://www.marinelifeangus.co.uk)
